General Plasma Introduces an Improved Rotary Magnetron Cathode

© General Plasma Inc.

General Plasma recently introduced its improved Rotary Magnetron Cathode to the photovoltaic industry. Our Rotary Magnetron innovations offer superior performance for solar applications.

Our Rotary Magnetron End Block is a robust low maintenance design that incorporates a ferrofluid vacuum seal and an integrated mechanical rotary water seal. By eliminating all lip seals, maintenance and downtime are dramatically reduced. The General Plasma End Block is ideal for planar magnetron retrofits, and new and existing system designs.

Visit booth H6 (Hall C1) at the Photovoltaic Technology Show 2009 in Munich to meet with our knowledgeable product representatives and learn more about General Plasma's improved Rotary Magnetron and other advanced source products.

For more information visit our website www.generalplasma.com, or contact us at sales@generalplasma.com.
